TITLE : INTERNALLY ILLUMINATED DISPLAY
SYSTEM

ABSTRACT : PROBLEM TO BE SOLVED: To obtain an internally illuminated display system which is adequately usable outdoors under severe use conditions, such as rainfall and high humidity in particular, relating to the internally illuminated display system of an edge light system.

SOLUTION: The internally illuminated display system disposed with a light source section at the end of a light transmission section is constituted by enclosing a gasket 3 onto the end of the light transmission section disposed with at least the light source 1 and building this gasket 3 within a fixing frame 4 enclosed onto the outer edge of the light transmission plate 2. Since the system is composed of parts of a dry system, the system is easy to assemble and disassemble, an excellent maintenance characteristic and excellent water-proofness is obtained.
